

# FlashUSDT: Educational TRC-20 Token

## Purpose

FlashUSDT is a TRC-20 token deployed on the TRON blockchain, created purely for educational purposes. It simulates the appearance and behavior of popular stablecoins like USDT to help students, developers, and blockchain enthusiasts understand how scammers replicate tokens to trick users.

## Key Features

- 10,000,000,000 total supply
- 6-month expiration simulation
- Same symbol, decimal precision as USDT
- Transferable across all TRC-20 compatible wallets (e.g. TronLink)
- Custom logo inspired by Tether with clear educational markings

## Use Cases

FlashUSDT is used in workshops, training sessions, and blockchain courses to:

- Show how fake tokens can mimic real ones
- Help users detect and avoid scams
- Demonstrate the importance of verifying token contracts

## Disclaimer

This token has no monetary value and is not associated with Tether or any financial entity. Do not trade, invest in, or use FlashUSDT outside of educational environments.

## About the Creator

Mouad BINOUNI is a blockchain developer, DApp builder, technical advisor, and cryptocurrency enthusiast. Passionate about educating users on decentralized technologies and Web3 safety, he created FlashUSDT to help students and developers identify and understand fake tokens in real-world simulations.
